Stakeholder Analysis

Profit Recovery Analytics Platform

Analysis Detail	Value
Deliverable	03_Stakeholder_Analysis
Version	1.0
Period	FY2025-FY2026
Prepared by	Aishi Dutta
Source of truth	01_Company_Profile and 02_Business_Requirements_Document

Purpose. This deliverable defines who influences, validates, consumes and acts on the Profit Recovery BI project outputs.

Stakeholder Matrix - Executive, Technology and Operations

The matrix below translates the Company Profile and BRD into stakeholder-level needs. Roles are fictional and should be interpreted by function, not as named employees.

Stakeholder	Role	Responsibilities	Business Goals	Pain Points
CEO	Executive sponsor	Set strategic direction, approve recovery priorities, remove cross-functional blockers.	Restore profitable growth, protect customer trust, align leadership around measurable action.	Growth is visible, but profit leakage is not yet explained in one executive view.
CFO	Financial sponsor	Validate margin logic, cost attribution, settlement impact and financial controls.	Improve profit margin from 9% to 14% and reduce avoidable leakage.	Costs, discounts, refunds and commissions are difficult to reconcile across functions.
COO	Operating sponsor	Own fulfilment, logistics, warehouse, inventory and service recovery priorities.	Reduce delivery time to 3 days and improve operational reliability.	Operational exceptions are spread across warehouse, courier and support systems.
CMO	Commercial sponsor	Guide acquisition, retention, campaign efficiency and customer growth strategy.	Raise marketing ROI to 3.5x and reduce CAC to ₹950.	Spend is rising faster than proven retention and contribution quality.
CTO	Technology sponsor	Ensure source availability, access control, refresh feasibility and platform reliability.	Provide secure, auditable data pipelines for BI delivery.	Data is useful only if source lineage, security and refresh rules are clear.
Head of Operations	Operations owner	Coordinate fulfilment, logistics, inventory and exception management actions.	Reduce delays, improve service levels and connect operating metrics to profit.	Teams see symptoms but not the combined root-cause picture.
Warehouse Manager	Warehouse SME	Manage receiving, picking, packing, dispatch and warehouse exception resolution.	Improve pick-pack accuracy, dispatch SLA and warehouse productivity.	Warehouse issues can be blamed for delays without clear event-level evidence.

Engagement Implications

- Executive sponsors approve the recovery agenda, target trade-offs and action ownership; their views must remain concise and financially grounded.
- Technology and operations stakeholders convert strategic recovery themes into source availability, process exceptions, warehouse actions and SLA diagnostics.
- Warehouse and operations users should be consulted early because their event data determines whether delivery, inventory and return hypotheses can be tested reliably.

Stakeholder Matrix - Commercial, Customer and Analytics

Stakeholder	Role	Responsibilities	Business Goals	Pain Points
Marketing Manager	Marketing SME	Manage campaigns, acquisition channels, promotional mechanics and cohort follow-up.	Improve campaign quality, repeat purchases and channel-level ROI.	Campaign success can look strong on orders but weak on retained profit.
Finance Manager	Finance SME	Prepare margin analysis, reconcile settlement logic and validate financial KPIs.	Create trusted financial views for profit, refund and cost decisions.	Manual reconciliation slows root-cause analysis and stakeholder confidence.
Supply Chain Manager	Supply chain SME	Monitor inventory flow, supplier availability, replenishment and stock imbalance.	Reduce stockouts, ageing inventory and fulfilment cost from inventory imbalance.	Inventory problems may surface as delays, cancellations or poor customer experience.
Seller Management	Marketplace quality owner	Manage seller onboarding, performance review, quality actions and suspension logic.	Improve seller quality while protecting marketplace assortment and commission yield.	Poor seller quality can drive returns, complaints and delivery exceptions.
Customer Support Manager	Customer voice owner	Manage tickets, complaint themes, refund escalations and customer recovery actions.	Raise satisfaction to 4.6/5 and reduce repeat complaints.	Support volume is rising, but drivers must be tied to order, delivery and return events.
Data & Analytics Team	BI delivery team	Build datasets, KPI logic, analysis assets, dashboards and governance documentation.	Deliver a trusted single source of truth for profit recovery decisions.	Ambiguous definitions and incomplete lineage can weaken adoption.
Business Intelligence Analyst	Project analyst	Translate requirements into SQL, Python analysis, dashboard prototypes and insights.	Produce defensible analysis that links evidence to executive recommendations.	Needs clear business definitions, owners and data access to avoid rework.

Engagement Implications

- Commercial, seller and support stakeholders explain why customer demand, seller quality, returns and complaint themes are changing behind the headline KPIs.
- Finance and analytics stakeholders protect metric discipline by reconciling revenue, costs, refunds, commissions, campaign spend and dashboard calculations.
- The BI Analyst is the translation point between leadership questions, functional context, SQL/Python analysis and Power BI dashboard acceptance.

Decision, Reporting and Data Needs - Part 1

Stakeholder	Business Decisions	Reports Needed	KPIs	Dashboards Required	Data Required
CEO	Prioritize recovery initiatives, assign owners, approve targets and investment trade-offs.	Executive profit recovery summary, KPI movement, risk and action log.	Revenue growth; profit margin; CSAT; repeat purchase rate.	Executive Overview; Profitability; Customer Experience.	KPI summary, financial trends, customer experience, initiative status.
CFO	Approve margin definitions, cost allocation, finance views and investment controls.	Margin bridge, refund leakage, CAC and ROI finance review.	Profit margin; annual profit; CAC; marketing ROI; refund impact.	Profitability; Marketing; Returns.	Revenue, discount, refund, commission, marketing spend and settlement data.
COO	Prioritize process fixes, warehouse actions, courier allocation and SLA recovery.	Operations exception report, delivery health and warehouse performance.	Average delivery time; on-time delivery; RTO; warehouse SLA.	Logistics; Warehouse Operations; Executive Overview.	Warehouse scans, shipment events, delivery status, return pickup and inventory data.
CMO	Shift budget by channel, refine offers, prioritize cohorts and retention programs.	Marketing efficiency report, CAC waterfall and cohort repeat analysis.	Marketing ROI; CAC; repeat purchase rate; customer growth.	Marketing; Customer Experience; Executive Overview.	Campaign, channel, spend, acquisition source, conversion and repeat-order data.
CTO	Approve data access, refresh approach, masking and technical feasibility.	Data readiness, source availability and refresh status.	Data completeness; refresh success; access compliance; uptime.	Data Quality; Executive Overview.	Source metadata, access logs, refresh logs, schema and quality checks.
Head of Operations	Assign operational fixes, rebalance warehouse workload and escalate SLA issues.	Operations exception report and recovery action tracker.	Cycle time; backlog; average delivery time; return rate.	Logistics; Returns; Warehouse Operations.	Order events, warehouse allocation, dispatch, shipment, returns and support exceptions.
Warehouse Manager	Adjust labour, slotting, allocation handling and exception escalation.	Warehouse performance and dispatch breach report.	Pick accuracy; dispatch SLA; backlog; damage rate.	Warehouse Operations; Logistics.	Warehouse ID, allocation time, pick-pack scans, dispatch time, damage and stock status.

Design Implications

- Executive, finance, marketing and operations views should reconcile to the same revenue, profit, order, return and customer-experience definitions.
- Operational drill-through pages must connect warehouse scans, shipment events, inventory status and support escalations to the executive recovery scorecard.

Decision, Reporting and Data Needs - Part 2

Stakeholder	Business Decisions	Reports Needed	KPIs	Dashboards Required	Data Required
Marketing Manager	Optimize channel spend, pause weak campaigns and target profitable cohorts.	Campaign performance, CAC and cohort retention report.	Marketing ROI; CAC; conversion; repeat purchase rate.	Marketing; Customer Experience.	Campaign, spend, channel, customer source, order conversion and repeat purchase data.
Finance Manager	Confirm formulas, exclusions, financial reconciliation and variance explanations.	P&L bridge, settlement and refund leakage report.	Profit margin; refund value; commission contribution; CAC.	Profitability; Returns; Marketing.	Revenue, cost, discount, refund, settlement, commission and marketing spend data.
Supply Chain Manager	Adjust replenishment, transfer inventory and prioritize stock-risk actions.	Inventory optimization and stock exception report.	Stockout rate; inventory ageing; fulfilment cost; cancellation rate.	Inventory; Warehouse Operations; Logistics.	Stock ledger, supplier, replenishment, warehouse inventory and order allocation data.
Seller Management	Flag sellers for coaching, incentives, restrictions, suspension or renewal review.	Seller scorecard and seller quality risk report.	Seller rating; return rate; dispatch time; defect rate; commission contribution.	Seller Performance; Returns.	Seller profile, listing, rating, return, dispatch, defect, cancellation and commission data.
Customer Support Manager	Escalate recurring issues, refine support workflows and prioritize service recovery.	Support trend, complaint theme and CSAT recovery report.	CSAT; ticket volume; resolution time; repeat purchase rate; return rate.	Customer Experience; Returns; Logistics.	Tickets, complaint tags, CSAT, order, delivery, return and refund linkage data.
Data & Analytics Team	Select modelling grain, transformation logic, metric calculations and dashboard design.	Data quality report, KPI dictionary, analytical findings and dashboard release notes.	Data completeness; dashboard adoption; metric accuracy; refresh success.	Data Quality; Executive Overview; all analytical pages.	All approved source domains, transformation logs, KPI dictionary and quality checks.
Business Intelligence Analyst	Recommend analytical cuts, define testable hypotheses and prioritize insight backlog.	Analysis notebook, insight log, dashboard documentation and executive readout inputs.	Insight adoption; analysis accuracy; requirement coverage; delivery milestones.	Development workspace; Executive Overview; functional dashboards.	Approved analytical marts, raw extracts, KPI definitions and stakeholder feedback.

Design Implications

- Functional dashboards should expose exception reasons, not only totals, so managers can identify owners for seller, campaign, support and supply-chain actions.
- Analytics delivery depends on reusable marts, documented KPI logic and validation evidence that can be reused by later SQL, Python and Power BI deliverables.

Power vs Interest Matrix

The power-interest view defines engagement intensity. Executive sponsors and operating owners require close management because they approve scope, validate priorities and act on the findings.

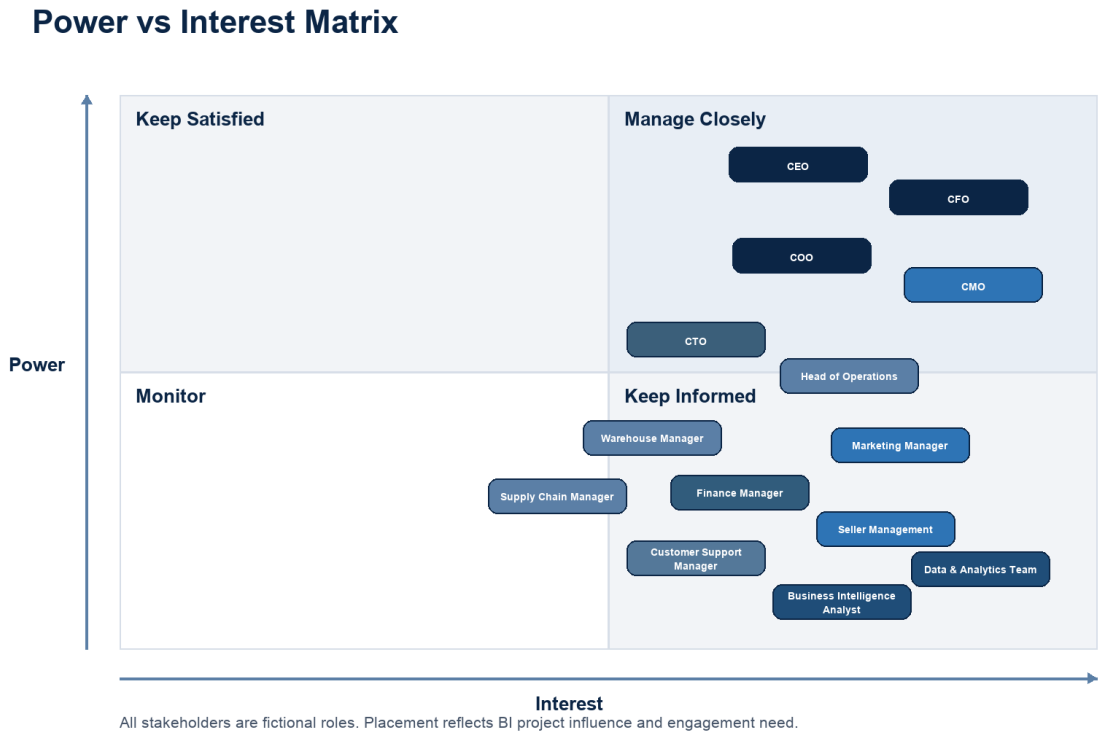

Figure 1. Power vs interest placement for NovaCart BI stakeholders.

Engagement Strategy

- Manage executive sponsors closely through compact steering updates focused on decisions, risks, target movement and action ownership.
- Keep functional managers informed with working-level evidence, exception lists and validation sessions before insights are escalated.
- Use the analytics team as a delivery partner for metric lineage, data quality checks, transformation logic and dashboard release notes.

Communication Matrix

Audience	Message	Format	Cadence	Owner
Executive sponsors	Progress, risks, KPI movement and decisions required	Steering readout	Monthly	BI Analyst / Data & Analytics
Finance and commercial owners	Margin, CAC, ROI, campaign quality and settlement implications	Working review	Biweekly	BI Analyst
Operations and supply chain owners	Warehouse, logistics, inventory, return and SLA exceptions	Operations review	Weekly	Head of Operations
Seller and customer voice owners	Seller quality, support themes, CSAT and return reasons	SME validation	Weekly during analysis	BI Analyst
Technology and analytics teams	Source access, data quality, refresh status and modelling decisions	Build standup	Weekly	Data & Analytics Team

RACI Matrix

Activity	Executive Sponsors	Finance / Commercial	Operations / Support	Data & Analytics	BI Analyst
Approve BI scope and objectives	A	C	C	R	I
Validate KPI definitions	A	R	C	R	C
Provide source data and quality rules	I	C	R	A	R
Build SQL and Python analysis assets	I	C	C	A	R
Build and validate dashboards	A	C	C	R	R
Accept final insights and actions	A	R	R	C	C

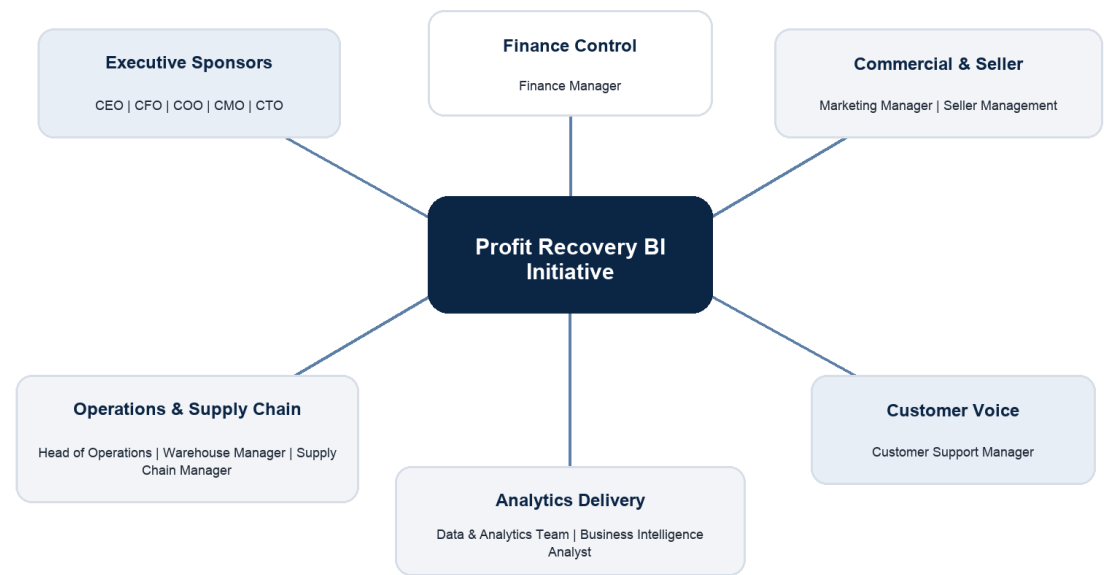

Legend: R = Responsible, A = Accountable, C = Consulted, I = Informed.

Governance Notes

- RACI ownership is assigned by workstream rather than hierarchy so delivery accountability remains clear during analysis and dashboard development.
- Communication cadence should tighten during data-quality validation, dashboard walkthroughs and executive sign-off.

Stakeholder Relationship Diagram

Stakeholder Relationship Diagram

Relationship principle: executives set direction, managers validate business meaning, analytics converts requirements into trusted decision assets.

Figure 2. Relationship model for stakeholder governance and BI delivery.

Engagement Principles

- Use executives for priority, funding, target and action-owner decisions.
- Use functional managers to validate business meaning, root-cause hypotheses and practical actions.
- Use technology and analytics stakeholders to confirm data availability, security and refresh feasibility.
- Use the BI Analyst as the translation layer between business questions, datasets, analysis and dashboards.
