

NovaCart

India's Intelligent Online Marketplace

Smart Shopping. Smarter Decisions.

KPI Handbook

Profit Recovery Analytics Platform

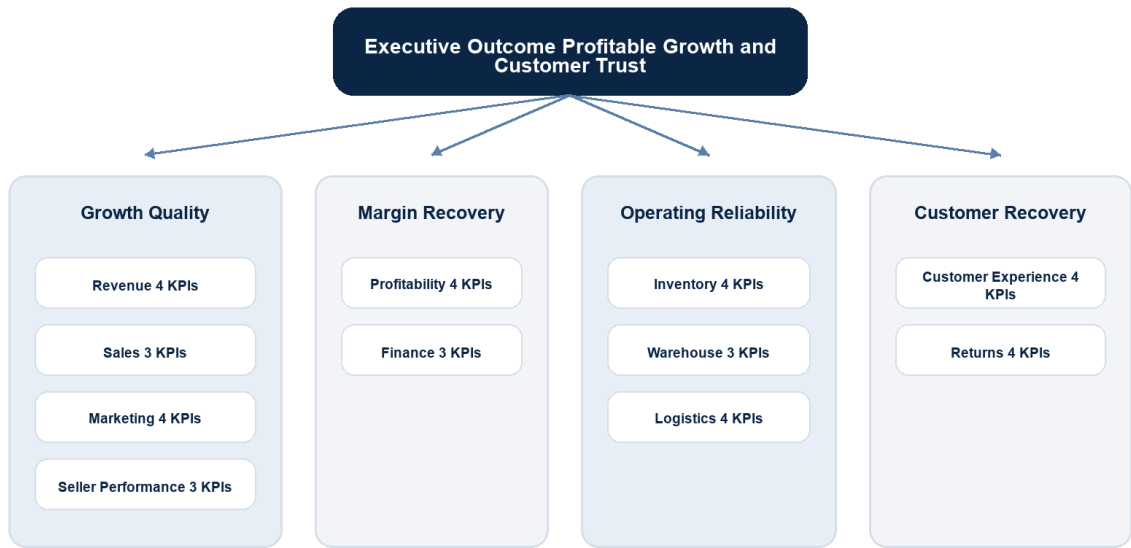

Handbook Detail	Value
Deliverable	04_KPI_Handbook
Version	1.0
Period	FY2025-FY2026
Prepared by	Aishi Dutta
Source of truth	01_Company_Profile, 02_BRD and 03_Stakeholder_Analysis
KPI dictionary	40 KPIs across 11 business domains

Purpose. This handbook defines the business KPIs that future SQL, Python, machine learning and Power BI deliverables should reuse without redefining core metrics.

KPI Architecture

The KPI architecture converts NovaCart's profit recovery objective into measurable domains. Each KPI has an owner, source, formula and dashboard destination so later technical assets can reuse the same definitions.

KPI Hierarchy - Profit Recovery Analytics Platform

Hierarchy reflects the approved NovaCart BI recovery scope: growth, margin, operations, customer experience, returns, finance and seller quality.

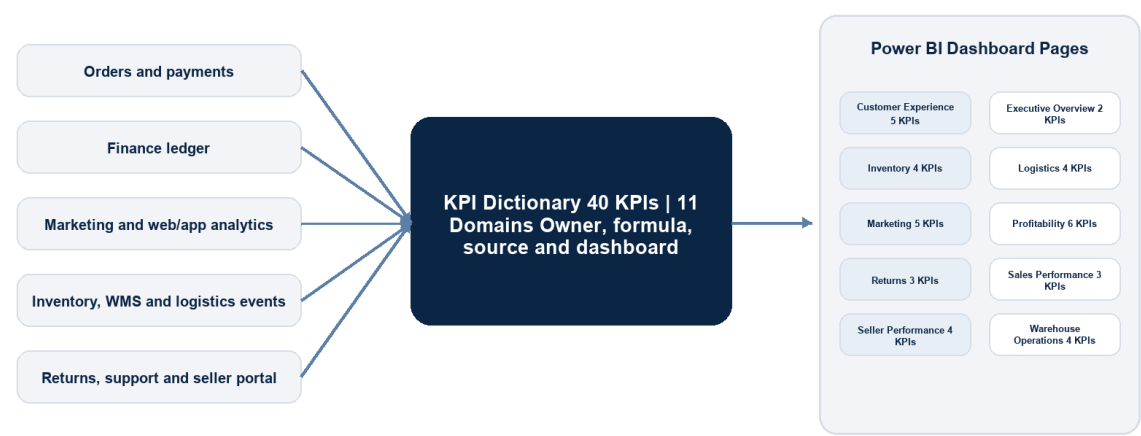

Figure 1. KPI hierarchy for the NovaCart profit recovery analytics platform.

KPI Domain	KPIs	Primary Owner	Primary Dashboard
Revenue	4	CEO / CFO	Executive Overview
Profitability	4	CFO	Profitability
Sales	3	Sales and Marketplace	Sales Performance
Marketing	4	CMO	Marketing
Inventory	4	Supply Chain Manager	Inventory
Warehouse	3	Warehouse Manager	Warehouse Operations
Logistics	4	Head of Operations	Logistics
Customer Experience	4	Customer Support Manager	Customer Experience
Returns	4	Seller Management / Operations	Returns
Finance	3	Finance Manager	Profitability
Seller Performance	3	Seller Management	Seller Performance

Dictionary Design

The Excel dictionary is designed as the operational lookup layer for analysts. It should be referenced when building SQL marts, Python notebooks, machine learning features and Power BI measures.

KPI Dictionary to Dashboard Alignment

The Excel dictionary is the operational lookup table for future SQL, Python and Power BI work. Each KPI carries a definition, formula, owner, source and dashboard destination.

Figure 2. How KPI definitions connect sources to dashboard pages.

Required Field Meaning

Field	Usage Standard
Business Definition	Plain-English interpretation of the KPI and its measurement boundary.
Formula	Calculation logic that should be translated into SQL, Python or DAX without changing intent.
Owner	Business accountable party for definition approval and interpretation.
Target and Current Value	Benchmark used to identify performance gaps and track improvement.
Data Source and Dashboard	Approved source domain and primary consumption surface.

Revenue and Profitability KPIs

These KPIs define the top-level growth and margin scorecard for executive review.

KPI	Business Definition and Purpose	Formula	Owner and Frequency	Current, Target, Source and Dashboard
KPI-REV-01 Revenue Growth	Definition: Year-over-year increase in net revenue after cancellations, refunds and approved adjustments. Purpose: Shows whether NovaCart is scaling demand fast enough to fund the profit recovery plan.	$(\text{Current period net revenue} - \text{prior period net revenue}) / \text{prior period net revenue}$	Owner: CEO / CMO Frequency: Monthly	Current: 31% Target: 40% Source: Orders, payments and finance ledger Dashboard: Executive Overview
KPI-REV-02 Annual Revenue	Definition: Total recognized net revenue for the financial year. Purpose: Anchors executive growth tracking and downstream profitability analysis.	Sum of net order revenue for completed orders	Owner: CFO Frequency: Monthly and annual	Current: ₹185 Crore Target: ₹259 Crore at 40% growth Source: Orders, payments and finance ledger Dashboard: Executive Overview
KPI-REV-03 Average Order Value	Definition: Average net revenue earned per completed customer order. Purpose: Identifies whether growth is being driven by basket quality or only by order volume.	$\text{Net revenue} / \text{completed orders}$	Owner: Sales and Marketplace Frequency: Weekly	Current: ₹3,364 Target: Increase without margin dilution Source: Orders and payment transactions Dashboard: Sales Performance
KPI-REV-04 Revenue per Active Seller	Definition: Average annual net revenue generated per active seller. Purpose: Measures seller base productivity and helps identify categories needing seller quality action.	$\text{Net revenue} / \text{active sellers}$	Owner: Seller Management Frequency: Monthly	Current: ₹35.6 Lakh Target: Improve through profitable seller mix Source: Orders, seller profiles and finance ledger Dashboard: Seller Performance
KPI-PRO-01 Profit Margin	Definition: Net profit as a percentage of net revenue. Purpose: Primary measure of whether NovaCart is recovering profit while continuing to grow.	$\text{Net profit} / \text{net revenue}$	Owner: CFO Frequency: Monthly	Current: 9% Target: 14% Source: Finance ledger and cost allocations Dashboard: Profitability
KPI-PRO-02 Annual Profit	Definition: Total annual profit after operating costs, refunds, marketing costs and fulfillment expenses. Purpose: Quantifies the financial value created by the recovery initiative.	$\text{Net revenue} - \text{operating costs}$	Owner: CFO Frequency: Monthly and annual	Current: ₹16.5 Crore Target: ₹36.3 Crore at 14% margin on growth plan Source: Finance ledger, refunds, marketing and logistics cost data Dashboard: Profitability
KPI-PRO-03 Contribution Margin per Order	Definition: Average contribution generated by each completed order after variable costs. Purpose: Connects unit economics to marketing, seller, logistics and return decisions.	$(\text{Net revenue} - \text{variable fulfillment, discount, refund and commission costs}) / \text{completed orders}$	Owner: Finance Manager Frequency: Weekly	Current: ₹300 Target: ₹475 or higher Source: Finance ledger, order costs and refund adjustments Dashboard: Profitability
KPI-PRO-04 Discount Leakage Rate	Definition: Share of gross order value lost to unplanned or poorly controlled discounts. Purpose: Highlights margin leakage from campaigns, seller offers and manual exceptions.	$\text{Unplanned discount value} / \text{gross merchandise value}$	Owner: CFO / CMO Frequency: Weekly	Current: 7.5% Target: Below 5% Source: Orders, campaign spend and promotion rules Dashboard: Marketing

Interpretation Notes

- Revenue growth must be read alongside average order value and revenue per active seller so volume growth does not hide weak seller productivity.
- Profitability KPIs reconcile back to the FY2025 revenue of ₹185 Crore, profit of ₹16.5 Crore and approximately 9% margin established in the Company Profile.

Sales and Marketing KPIs

These KPIs distinguish demand generation, conversion quality, paid acquisition efficiency and customer retention.

KPI	Business Definition and Purpose	Formula	Owner and Frequency	Current, Target, Source and Dashboard
KPI-SAL-01 Annual Order Volume	Definition: Total number of customer orders completed in the financial year. Purpose: Shows marketplace demand scale and creates the denominator for operating KPIs.	Count of completed orders	Owner: COO / Sales and Marketplace Frequency: Monthly	Current: 550,000 Target: 700,000 profitable orders Source: Order management system Dashboard: Sales Performance
KPI-SAL-02 Order Growth Rate	Definition: Year-over-year percentage increase in completed order volume. Purpose: Separates demand momentum from revenue mix and pricing effects.	$(\text{Current period orders} - \text{prior period orders}) / \text{prior period orders}$	Owner: Sales and Marketplace Frequency: Monthly	Current: 28% Target: Above 30% Source: Order management system Dashboard: Sales Performance
KPI-SAL-03 Conversion Rate	Definition: Share of qualified visits that convert into completed orders. Purpose: Identifies friction in the shopping journey before marketing spend is increased.	Completed orders / qualified product sessions	Owner: Marketing Manager Frequency: Weekly	Current: 3.2% Target: 4.0% Source: Web and app analytics, orders Dashboard: Marketing
KPI-MKT-01 Marketing ROI	Definition: Revenue generated for every rupee spent on marketing campaigns. Purpose: Directs spend toward campaigns that create profitable demand.	Attributed revenue / marketing spend	Owner: CMO Frequency: Weekly	Current: 2.4x Target: 3.5x Source: Campaign platform, orders and attribution data Dashboard: Marketing
KPI-MKT-02 Customer Acquisition Cost	Definition: Average marketing cost required to acquire a new customer. Purpose: Controls paid-growth efficiency and supports channel budget decisions.	Marketing acquisition spend / new customers acquired	Owner: CMO / Finance Manager Frequency: Weekly	Current: ₹1,280 Target: ₹950 Source: Campaign platform, customer registration and orders Dashboard: Marketing
KPI-MKT-03 Campaign Conversion Rate	Definition: Share of campaign-attributed visits that become completed orders. Purpose: Shows whether paid traffic quality is improving after channel mix changes.	Campaign-attributed completed orders / campaign-attributed visits	Owner: Marketing Manager Frequency: Weekly	Current: 2.8% Target: 3.6% Source: Campaign platform, web and app analytics, orders Dashboard: Marketing
KPI-MKT-04 Repeat Purchase Rate	Definition: Share of active customers who place more than one order in the measured period. Purpose: Measures retention economics and customer trust recovery.	Customers with repeat orders / active purchasing customers	Owner: CMO Frequency: Monthly	Current: 34% Target: 50% Source: Customer master and order history Dashboard: Customer Experience

Interpretation Notes

- Sales and marketing KPIs separate demand volume from campaign efficiency so the CMO can reduce CAC while protecting repeat purchase growth.
- Conversion and repeat purchase rates should be segmented by channel, category, city tier and customer cohort in later analysis.

Inventory and Warehouse KPIs

These KPIs measure supply availability, warehouse accuracy and fulfilment pressure before they become customer-facing failures.

KPI	Business Definition and Purpose	Formula	Owner and Frequency	Current, Target, Source and Dashboard
KPI-INV-01 Stockout Rate	Definition: Share of demand events where an item is unavailable when a customer attempts to buy. Purpose: Reduces lost sales and avoids customer dissatisfaction caused by unavailable items.	Stockout events / product demand events	Owner: Supply Chain Manager Frequency: Weekly	Current: 9.5% Target: Below 5% Source: Inventory ledger, product availability and order allocation data Dashboard: Inventory
KPI-INV-02 Inventory Ageing Rate	Definition: Share of sellable stock sitting beyond the ageing threshold. Purpose: Controls working capital and markdown risk across categories.	Units above ageing threshold / total sellable units	Owner: Supply Chain Manager Frequency: Weekly	Current: 14% Target: Below 8% Source: Inventory ledger and warehouse stock records Dashboard: Inventory
KPI-INV-03 Inventory Turnover	Definition: Number of times inventory is sold and replenished during the year. Purpose: Assesses whether buying, replenishment and demand planning are balanced.	Cost of goods sold or shipped value / average inventory value	Owner: Supply Chain Manager Frequency: Monthly	Current: 5.8x Target: 7.0x Source: Inventory ledger, purchase records and shipment data Dashboard: Inventory
KPI-INV-04 Forecast Accuracy	Definition: Accuracy of demand forecast versus actual demand at category or SKU level. Purpose: Improves replenishment, stockout prevention and warehouse allocation planning.	$1 - \text{absolute forecast error} / \text{actual demand}$	Owner: Data & Analytics Team Frequency: Monthly	Current: 72% Target: 85% Source: Forecast output, historical demand and inventory records Dashboard: Inventory
KPI-WHS-01 Pick Accuracy	Definition: Share of picked items that match the ordered SKU and quantity. Purpose: Reduces wrong-item deliveries, returns and support complaints.	Correct picks / total picked items	Owner: Warehouse Manager Frequency: Daily	Current: 96.8% Target: 99.2% Source: Warehouse management system pick-pack scans Dashboard: Warehouse Operations
KPI-WHS-02 Dispatch SLA Compliance	Definition: Share of orders dispatched within the approved warehouse dispatch SLA. Purpose: Measures whether fulfilment nodes are creating delivery delays before courier pickup.	Orders dispatched within SLA / total dispatch-eligible orders	Owner: Warehouse Manager Frequency: Daily	Current: 88% Target: 96% Source: Warehouse allocation, pick-pack and dispatch events Dashboard: Warehouse Operations
KPI-WHS-03 Warehouse Backlog	Definition: Open order lines waiting for pick, pack, dispatch or exception resolution. Purpose: Flags operating pressure before it becomes customer-facing delay.	Count of open warehouse order lines past expected processing stage	Owner: Head of Operations Frequency: Daily	Current: 18,500 orders Target: Below 6,000 orders Source: Warehouse management system and order events Dashboard: Warehouse Operations

Interpretation Notes

- Inventory, warehouse and logistics KPIs must share order, SKU, warehouse and timestamp keys so delivery delays can be traced to the correct process stage.
- Warehouse backlog and dispatch SLA are early-warning measures for the 4.8-day average delivery time problem.

Logistics and Customer Experience KPIs

These KPIs connect delivery reliability, support pressure and satisfaction into one customer trust view.

KPI	Business Definition and Purpose	Formula	Owner and Frequency	Current, Target, Source and Dashboard
KPI-LOG-01 Average Delivery Time	Definition: Average number of days from order placement to successful customer delivery. Purpose: Measures service reliability and directly supports customer trust recovery.	Average(delivery timestamp - order timestamp)	Owner: Head of Operations Frequency: Weekly	Current: 4.8 days Target: 3 days Source: Orders and courier tracking events Dashboard: Logistics
KPI-LOG-02 On-Time Delivery Rate	Definition: Share of shipments delivered on or before promised delivery date. Purpose: Shows courier and route reliability across regions and warehouses.	On-time delivered shipments / total delivered shipments	Owner: Head of Operations Frequency: Weekly	Current: 82% Target: 94% Source: Courier tracking events and promised delivery dates Dashboard: Logistics
KPI-LOG-03 Return to Origin Rate	Definition: Share of shipments returned before successful customer delivery. Purpose: Identifies avoidable logistics cost, address quality issues and customer cancellation risk.	RTO shipments / shipped orders	Owner: Logistics / Support Frequency: Weekly	Current: 6.8% Target: Below 4.5% Source: Courier tracking, orders and customer contact data Dashboard: Logistics
KPI-LOG-04 Courier SLA Breach Rate	Definition: Share of courier shipments missing contracted delivery SLA. Purpose: Supports courier allocation, partner review and escalation decisions.	Courier SLA breaches / courier-handled shipments	Owner: Head of Operations Frequency: Weekly	Current: 15% Target: Below 7% Source: Courier tracking events and partner SLA rules Dashboard: Logistics
KPI-CX-01 Customer Satisfaction Score	Definition: Average customer satisfaction rating collected after delivery or support interaction. Purpose: Tracks whether operational fixes are visible to customers.	Average CSAT rating	Owner: Customer Support Manager Frequency: Weekly	Current: 3.9/5 Target: 4.6/5 Source: CSAT surveys, support platform and order records Dashboard: Customer Experience
KPI-CX-02 Support Ticket Growth	Definition: Year-over-year change in customer support ticket volume. Purpose: Signals whether returns, delays and seller defects are increasing customer friction.	(Current period tickets - prior period tickets) / prior period tickets	Owner: Customer Support Manager Frequency: Weekly	Current: 36% Target: Below 10% Source: Support platform and complaint tags Dashboard: Customer Experience
KPI-CX-03 First Response Time	Definition: Average time from ticket creation to first customer support response. Purpose: Measures support responsiveness during service recovery.	Average(first response timestamp - ticket creation timestamp)	Owner: Customer Support Manager Frequency: Daily	Current: 6.5 hours Target: 2 hours Source: Support platform timestamps Dashboard: Customer Experience
KPI-CX-04 Resolution TAT	Definition: Average time required to resolve customer support tickets. Purpose: Links support productivity to customer trust and repeat purchase recovery.	Average(ticket resolution timestamp - ticket creation timestamp)	Owner: Customer Support Manager Frequency: Weekly	Current: 28 hours Target: Below 12 hours Source: Support platform status history Dashboard: Customer Experience

Interpretation Notes

- Customer experience KPIs should be linked to logistics, returns and seller data before root-cause conclusions are escalated.
- Support ticket growth is a pressure signal, while CSAT, response time and resolution TAT measure whether service recovery is improving.

Returns and Finance KPIs

These KPIs quantify reverse logistics, refund speed, settlement accuracy and unit cost leakage.

KPI	Business Definition and Purpose	Formula	Owner and Frequency	Current, Target, Source and Dashboard
KPI-RET-01 Return Rate	Definition: Share of completed orders that are returned by customers. Purpose: Primary indicator of reverse logistics cost and product or seller quality issues.	Returned orders / completed orders	Owner: Seller Management / Operations Frequency: Weekly	Current: 12% Target: Below 8% Source: Return requests, orders and warehouse inspection records Dashboard: Returns
KPI-RET-02 Return Reason Accuracy	Definition: Share of return records with validated, usable root-cause reason codes. Purpose: Improves root-cause analysis for seller, product, logistics and customer decisions.	Validated return reason records / total return records	Owner: Data & Analytics Team Frequency: Weekly	Current: 76% Target: 90% Source: Return portal, inspection records and support tags Dashboard: Returns
KPI-RET-03 Refund Cycle Time	Definition: Average time from return approval to customer refund completion. Purpose: Reduces customer dissatisfaction and finance reconciliation delays.	Average(refund completion timestamp - return approval timestamp)	Owner: Finance Manager Frequency: Weekly	Current: 5.2 days Target: 2 days Source: Return approvals, payment gateway and finance ledger Dashboard: Returns
KPI-RET-04 Return-to-Stock Cycle Time	Definition: Average time from return pickup to sellable inventory update. Purpose: Reduces inventory blind spots and speeds recovery of sellable stock.	Average(sellable stock update timestamp - return pickup timestamp)	Owner: Warehouse Manager Frequency: Weekly	Current: 6.4 days Target: 3 days Source: Return pickup, inspection and warehouse inventory records Dashboard: Warehouse Operations
KPI-FIN-01 Refund Value Leakage	Definition: Value of refunds, disputes or adjustments not explained by approved business rules. Purpose: Highlights controllable financial leakage from returns and support exceptions.	Unexplained refund and adjustment value	Owner: Finance Manager Frequency: Monthly	Current: ₹3.8 Crore Target: Below ₹2.0 Crore Source: Finance ledger, refund records and support escalations Dashboard: Profitability
KPI-FIN-02 Settlement Reconciliation Accuracy	Definition: Share of seller, customer and payment settlements reconciled without variance. Purpose: Protects trust in profitability, commission and refund reporting.	Reconciled settlement records / total settlement records	Owner: Finance Manager Frequency: Monthly	Current: 94.5% Target: 99% Source: Payment gateway, seller settlements and finance ledger Dashboard: Profitability
KPI-FIN-03 Cost-to-Serve per Order	Definition: Average operating cost required to fulfil, deliver, support and settle an order. Purpose: Creates a comparable unit-cost measure across customer, seller and warehouse segments.	(Fulfilment cost + logistics cost + support cost + refund handling cost) / completed orders	Owner: CFO / Finance Manager Frequency: Monthly	Current: ₹1,025 Target: Below ₹850 Source: Finance ledger, logistics invoices, support workload and warehouse costs Dashboard: Profitability

Interpretation Notes

- Returns and finance KPIs should be reconciled so operational return reasons can be connected to refund value and settlement leakage.
- Return-to-stock cycle time should be analysed by warehouse and category because it affects both customer availability and working capital.

Seller Performance KPIs

These KPIs evaluate seller quality, productivity and compliance with the marketplace operating model.

KPI	Business Definition and Purpose	Formula	Owner and Frequency	Current, Target, Source and Dashboard
KPI-SEL-01 Active Seller Count	Definition: Number of sellers with active listings and at least one fulfilled order in the period. Purpose: Measures marketplace supply health without counting inactive or low-quality sellers.	Count of qualified active sellers	Owner: Seller Management Frequency: Monthly	Current: 520 Target: 600 qualified sellers Source: Seller portal, listings and order history Dashboard: Seller Performance
KPI-SEL-02 Seller Average Rating	Definition: Average customer rating for seller performance across fulfilled orders. Purpose: Identifies seller quality risk before it creates returns and complaints.	Average seller rating	Owner: Seller Management Frequency: Weekly	Current: 4.1/5 Target: 4.5/5 Source: Seller ratings, order feedback and support tags Dashboard: Seller Performance
KPI-SEL-03 Seller Return Rate	Definition: Share of seller-attributed orders that are returned by customers. Purpose: Supports seller coaching, restriction and renewal decisions.	$\frac{\text{Seller-attributed returned orders}}{\text{seller-attributed completed orders}}$	Owner: Seller Management Frequency: Weekly	Current: 13.5% Target: Below 8% Source: Orders, return reasons and seller profiles Dashboard: Seller Performance

Interpretation Notes

- Seller performance KPIs should be used for coaching, incentive, restriction and renewal decisions rather than only retrospective reporting.
- The seller view must connect ratings, returns and dispatch SLA to revenue productivity and customer trust.
