

NovaCart

India's Intelligent Online Marketplace

Smart Shopping. Smarter Decisions.

Business Process Flow

Profit Recovery Analytics Platform

Process Document Detail	Value
Deliverable	06_Business_Process_Flow
Version	1.0
Period	FY2025-FY2026
Prepared by	Aishi Dutta
Source of truth	01_Company_Profile through 05_Business_Questions
Process coverage	8 operating workflows

Purpose. This document converts NovaCart's business context into process-level operating flows for future SQL, Python, machine learning and Power BI work.

Operating Process Architecture

The process model defines how NovaCart's operational events become analysis-ready data. The flows below preserve the established company context while giving later technical deliverables a clear source-process map.

NovaCart Business Process Architecture

End-to-end operating flow from customer demand to executive insight.

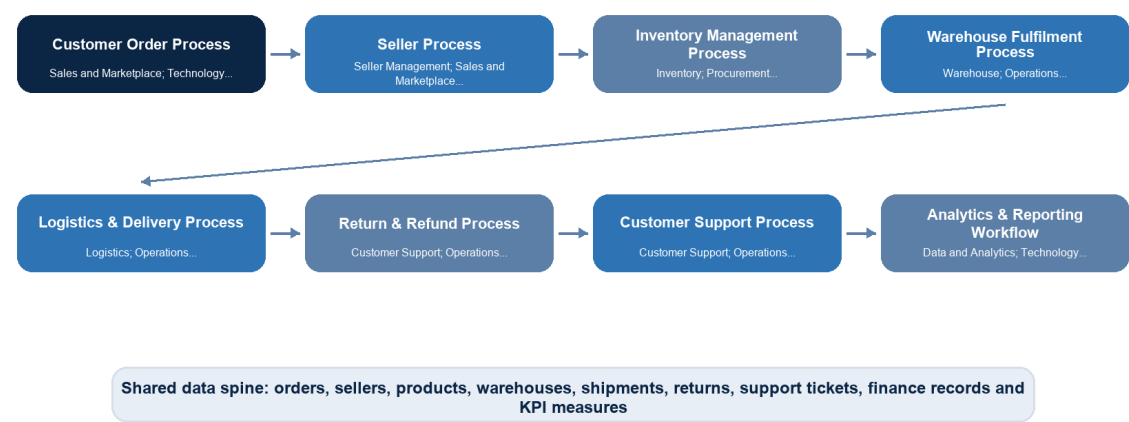

Figure 1. End-to-end business process architecture for the NovaCart BI portfolio.

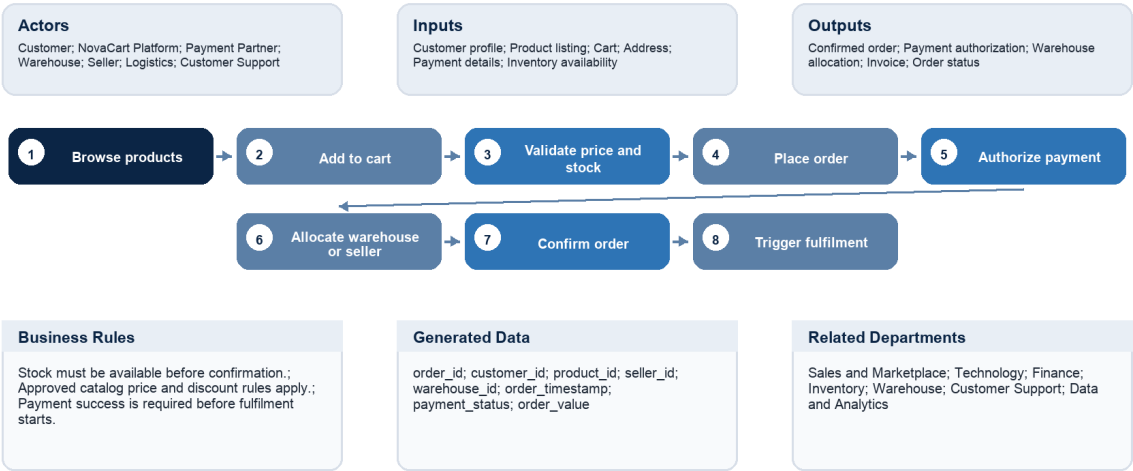

ID	Process	Primary Actors	Generated Data	Related Departments
P01	Customer Order Process	Customer; NovaCart Platform; Payment Partner...	order_id; customer_id; product_id; seller_id...	Sales and Marketplace; Technology; Finance...
P02	Seller Process	Seller; Seller Management; NovaCart Platform...	seller_id; listing_id; category; seller_rating...	Seller Management; Sales and Marketplace; Finance...
P03	Inventory Management Process	Supply Chain Manager; Inventory Team; Supplier...	sku_id; inventory_quantity; reorder_level; ageing_days...	Inventory; Procurement; Warehouse...
P04	Warehouse Fulfilment Process	Warehouse Manager; Picker; Packer...	pick_start_time; pack_time; dispatch_timestamp; warehouse_id...	Warehouse; Operations; Logistics...
P05	Logistics & Delivery Process	Logistics Team; Courier Partner; Customer...	tracking_id; courier_partner; pickup_timestamp; transit_event...	Logistics; Operations; Warehouse...
P06	Return & Refund Process	Customer; Customer Support; Seller...	return_id; return_reason; request_timestamp; pickup_timestamp...	Customer Support; Operations; Warehouse...
P07	Customer Support Process	Customer; Support Agent; Support Manager...	ticket_id; reason_code; severity; channel...	Customer Support; Operations; Logistics...
P08	Analytics & Reporting Workflow	BI Analyst; Data & Analytics Team; Executives...	fact_orders; fact_returns; dim_customer; dim_product...	Data and Analytics; Technology; Finance...

Order and Seller Processes

These workflows define marketplace demand capture and seller participation before fulfilment starts.

Customer Order Process

Process control view for BI source data and operational accountability

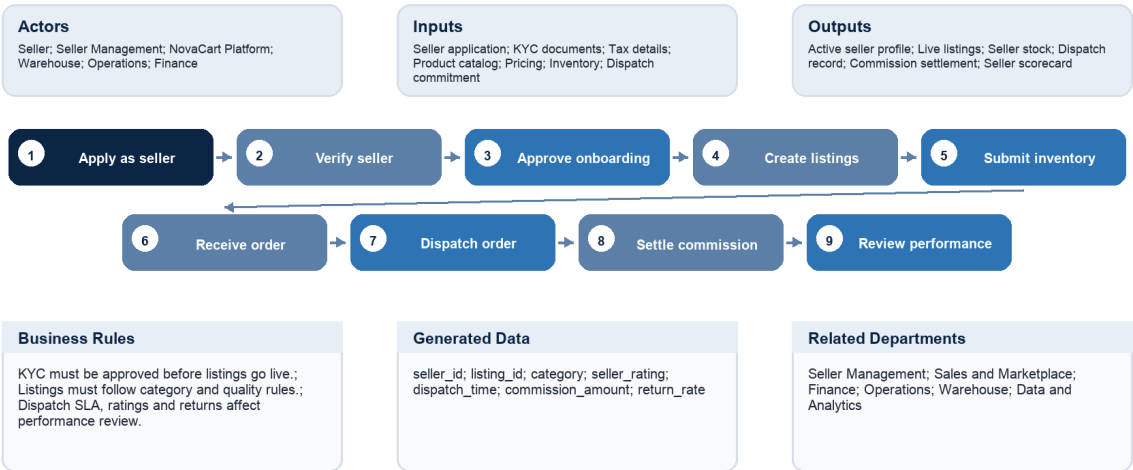

All process data fields are synthetic and designed for the NovaCart BI portfolio source model.

Figure 2. Customer Order Process: actors, inputs, outputs, business rules, generated data and departments.

Seller Process

Process control view for BI source data and operational accountability

All process data fields are synthetic and designed for the NovaCart BI portfolio source model.

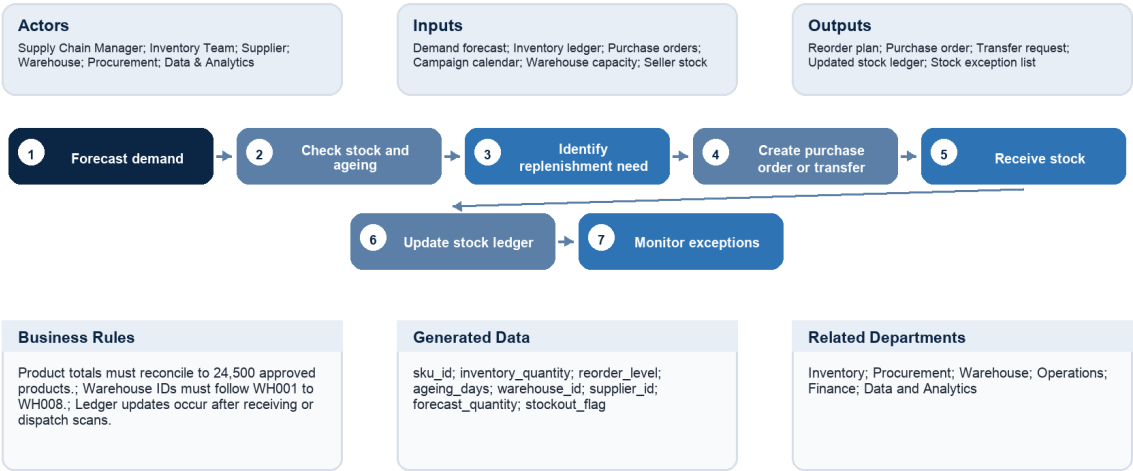

Figure 3. Seller Process: actors, inputs, outputs, business rules, generated data and departments.

Inventory and Fulfilment Processes

These workflows convert demand signals into stock movement, warehouse execution and dispatch-ready shipments.

Inventory Management Process

Process control view for BI source data and operational accountability

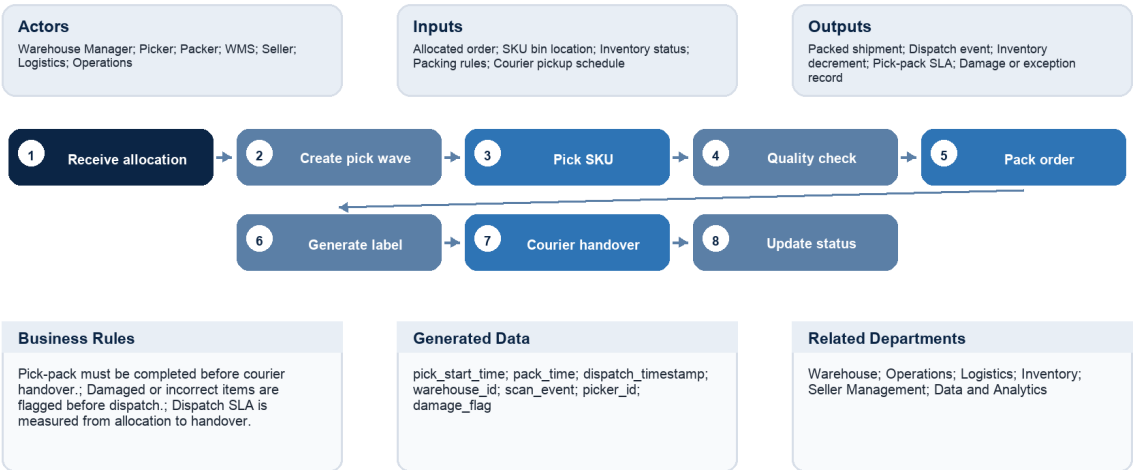

All process data fields are synthetic and designed for the NovaCart BI portfolio source model.

Figure 4. Inventory Management Process: actors, inputs, outputs, business rules, generated data and departments.

Warehouse Fulfilment Process

Process control view for BI source data and operational accountability

All process data fields are synthetic and designed for the NovaCart BI portfolio source model.

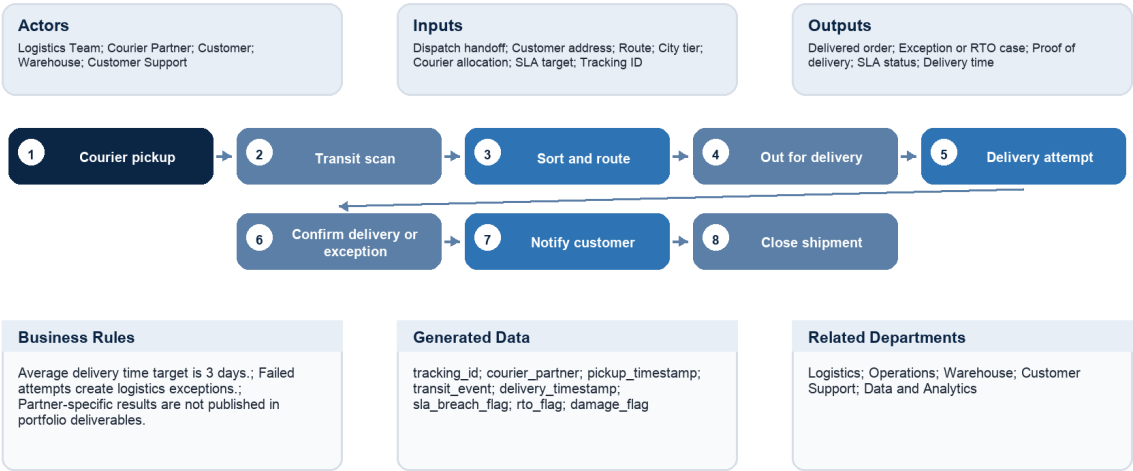

Figure 5. Warehouse Fulfilment Process: actors, inputs, outputs, business rules, generated data and departments.

Delivery and Reverse Logistics Processes

These workflows explain where delivery reliability, returns and refund outcomes generate customer and financial data.

Logistics & Delivery Process

Process control view for BI source data and operational accountability

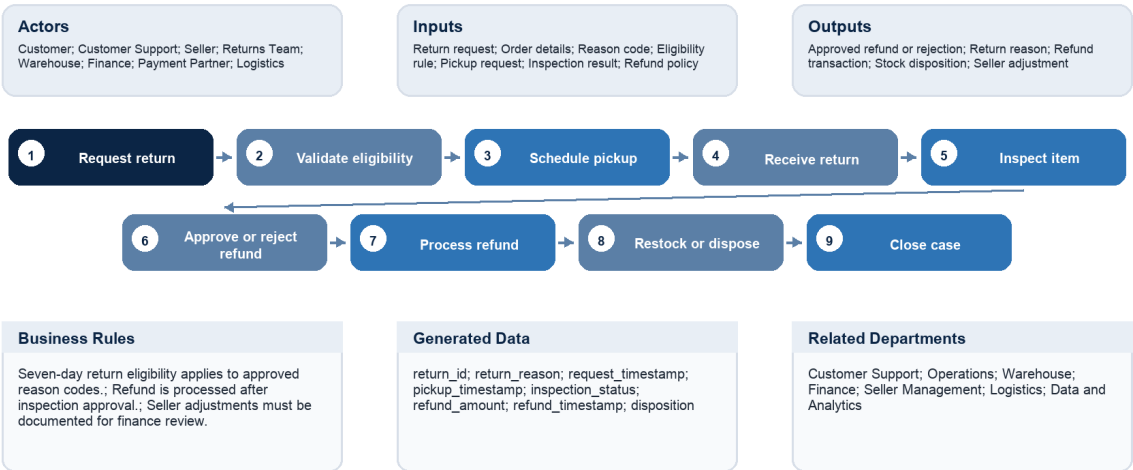

All process data fields are synthetic and designed for the NovaCart BI portfolio source model.

Figure 6. Logistics & Delivery Process: actors, inputs, outputs, business rules, generated data and departments.

Return & Refund Process

Process control view for BI source data and operational accountability

All process data fields are synthetic and designed for the NovaCart BI portfolio source model.

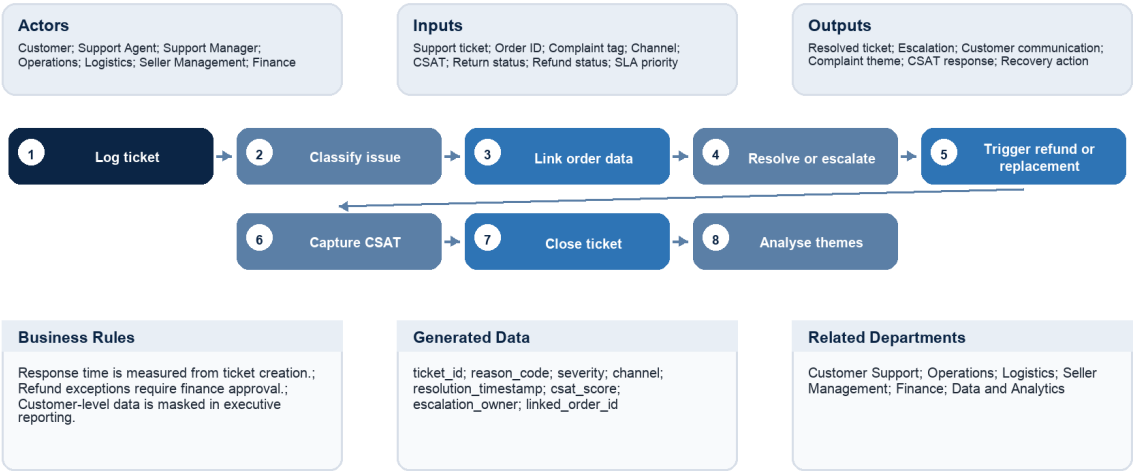

Figure 7. Return & Refund Process: actors, inputs, outputs, business rules, generated data and departments.

Support and Analytics Processes

These workflows close the loop from customer issues to recurring BI dashboards, analytical findings and executive action.

Customer Support Process

Process control view for BI source data and operational accountability

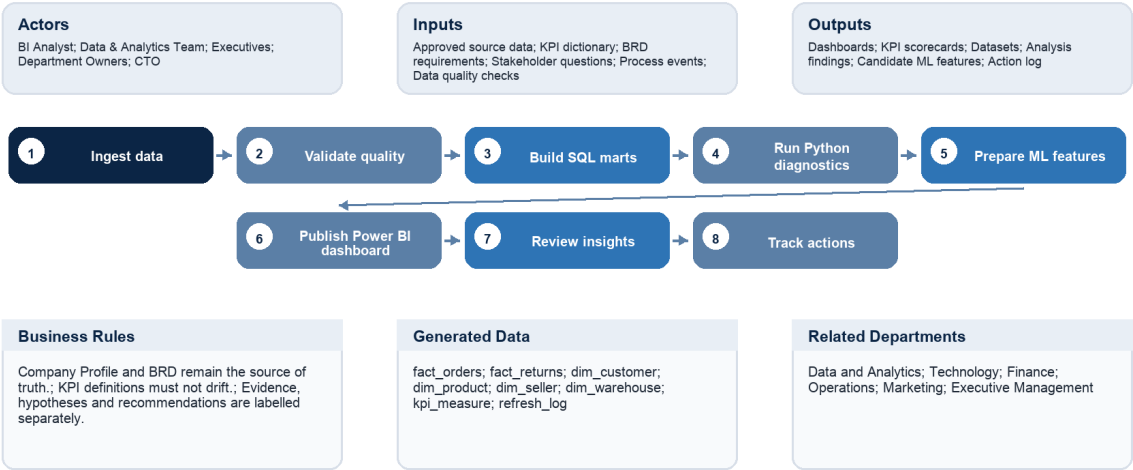

All process data fields are synthetic and designed for the NovaCart BI portfolio source model.

Figure 8. Customer Support Process: actors, inputs, outputs, business rules, generated data and departments.

Analytics & Reporting Workflow

Process control view for BI source data and operational accountability

All process data fields are synthetic and designed for the NovaCart BI portfolio source model.
